

# TransPac

## Delivery Automation Software

TransPac is an impactful multi-use solution for any LP Gas Delivery, Fuel Delivery, or Van Sales company to improve the efficiency of your drivers and create an effective scheduling and delivery process.

Integrated directly with your fleet management and accounting software, TransPac provides an automated process to improve the efficiency of your deliveries. With customer information available on a mobile device, drivers can view customer details, fulfill orders, and print invoices all while on site with the customer.

### TransPac can help you:

- **Increase driver utilization**  
Deliver daily schedules directly to driver's mobile device, with an optimized route to ensure the maximum amount of deliveries can be completed for the day.
- **Reduce costs through paperless processes**  
With electronic signature capture, delivery tickets and invoices can be printed and left on site providing proof of delivery, consensus of volume, and accurate transaction details.
- **Improve customer service**  
Provide detailed information to customers on order history, inventory levels, and scheduled deliveries to help improve their ordering and inventory management processes.
- **Enhance inventory management**  
ERP integration allows drivers and dispatchers to know what inventory is available on each truck, enabling changes in load quantities and inventory levels to be monitored in real time.
- **Simplify billing**  
By delivering an invoice at the point of delivery, the time it takes for you to receive payment will decrease dramatically.
- **SaaS integration**  
TransPac is a cloud-based application that integrates seamlessly with your fleet tracking and planning software, providing a complete fleet management solution that delivers valuable business intelligence to your back office systems.

Application designed with portrait and/or landscape user interface

High quality, point-of-sale tickets

TransPac is a component in a larger complete automation solution named FleetAtlas.

Progressively add components as your company grows.

Telematics
