

TS Easy Planning

Entry Level Fleet Planning

TS Easy Planning allows for efficient routes to be created based on scheduled deliveries and driver availability for the day, then communicates the schedule and GPS directions directly to the driver.

Dispatchers can easily enter new deliveries directly into an existing route, ensuring delivery times are met while still meeting fleet efficiency goals.

TS Easy Planning provides:

- **Increased efficiency**
As orders are entered into the system, deliveries are automatically created and assigned to the most accessible vehicle, and prioritized based on the most efficient route for each driver.
- **Fuel savings**
Automated scheduling allows for routes to be created based on the most fuel efficient delivery route – eliminating inefficient or erratic delivery routes that use excessive amounts of fuel.
- **Improved customer service**
Entering orders into the system as they are received provides the ability to communicate the approximate delivery time to the customer based on the route scheduled, instead of an estimated time. Additionally, customer information and notes can be added to the profile for drivers to view in the field.
- **Enhanced driver productivity**
Not only do drivers have the most up to date schedule loaded onto their mobile device, but routes are automatically populated with GPS navigation directions included.
- **Flexible scheduling**
Emergencies happen, but with an integrated tracking system you have the ability to easily locate the closest driver in proximity to your customer and adjust their schedule to ensure a rapid response time.

Simple drag and drop scheduling with detailed notes for each customer.

View multiple routes simultaneously.

TS Easy Planning is a component in a larger complete automation solution named FleetAtlas.

Progressively add components as your company grows.
