

Training and Test Kit

Mobile Training System

TouchStar's Training and Test Kit is a highly configurable system that allows you to engage with TouchStar fleet software and peripherals in a safe, closed environment.

The Training and Test Kit gives you insight into how your vehicles and back office systems will interact with TouchStar products without having to install a single component.

The Training and Test Kit can help you:

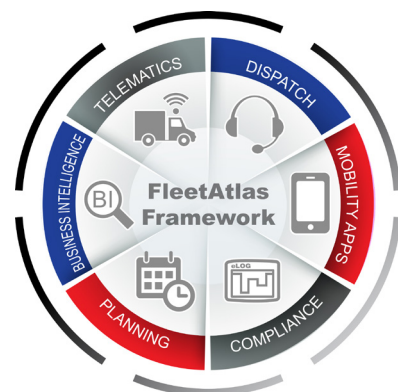

■ **Train drivers in an office environment**

The Training and Test Kit allows trainers to utilize TouchStar software and hardware in a production environment from the safety and convenience of an office or training room. No need to get into a moving vehicle - the highly portable Training and Test Kit sets up on a desk or table and requires minimal space.

■ **Configure your test system to match your live system**

The Training and Test Kit is highly configurable. From mobile apps to enterprise software to printers, scanners, and TouchStar's proprietary IntellINK, your trainers can piece together endless hardware and software solutions to meet your unique training purposes.

The Training and Test Kit is a component of a larger, complete automation solution called **FleetAtlas**.
